

Discover the first exhibitors of the “Ecological Vehicles” Expo at the the 4th annual EVER Monaco trade show

Monaco, January 30, 2009 – The organisers of EVER Monaco, the Renewable Energies & Ecological Vehicles trade show, today unveiled the first 2009 “Ecological Vehicles” exhibitors.

During the 4th annual EVER trade show, which will take place from 26-29 March 2009 at the Grimaldi Forum in Monaco, exhibitors and manufacturers will present their latest innovations and technological advances concerning mobility, displaying their latest clean vehicle models, both standard and prototypes.

For the fourth year in a row, **HONDA, CITROËN**, and **VENTURI**, which have stepped up their environmental protection initiatives over the past several years, want to reaffirm their engagement by taking part in the trade show. They will present their news vehicles and offer demonstrations of vehicles that run on alternative energies.

FAM AUTOMOBILE, which specialises in the study, design, manufacture, assembly and marketing of vehicles that address the various needs of manufacturers and importers, will present its “clean” line.

As for equipment manufacturers, the following will make an appearance:

FAVI, which specialises in the die-casting of copper alloys and a European leader in the supply of gearbox shift forks, will introduce its “die-cast copper rotor” intended for traction motors in electric vehicles. The “originality” of this technology lies in the injection of copper (with high electrical conductivity) into the rotor instead of aluminium (which is traditionally used) in order to boost the performance of electric motors.

REVA GmbH, which has been specialising in mobile energy for the past 13 years and is Sanyo’s largest European distributor, will present its car battery system solutions. It should be noted that **REVA GmbH** holds the licence for the distribution and use of Michael Schumacher products.

For the second consecutive year, EVER Monaco will dedicate a specific area to two-wheel vehicles. Thus, throughout the event, visitors will be able to discover and try out new “zero emission” transport solutions by various manufacturers, including:

SWEET’ELEC will present its *SweetGT* 125 cm³ electric scooter, as well as the *e-max*, which is already heralded as a revolution in electric scooters.

CLEAN ENERGY PLANET, a trailblazer in the implementation of complete public bicycle station solutions for electric-assist bicycles will unveil a 100% electric bicycle station and present a **preview** of its “*cardan*,” an electric chainless bicycle developed and assembled in France.

Aware of the environmental restrictions intended to limit the practice of all-terrain sports, **SCORPA ELECTRIC VEHICLES (S.E.V.)**, a key player in “clean” motor technologies that may be applied to these vehicles, will present its line of all-terrain two-wheel vehicles.

OMITTED – Not to be missed: the importer **SCOOTDISCOUNT** will unveil a **PREVIEW** of the first hybrid scooter.

Last but not least, there will be appearances by **Nissan, Mitsubishi, Newteon, Smart, Toyota, Lexus, Vectrix, L’Avere France, Lohr Industrie**, and other brands representing the green mobility sector about which we will undoubtedly share more information with you in a forthcoming press release.

It is important to add that, throughout the event, visitors will be able to test drive, free of charge, all types of ecological two- or four-wheel vehicles (hybrid cars and electric vehicles, as well as electric-assist bicycles and scooters) either on the road or in a secure car park.
